Weekly Coal Production

Production for Week Ended:
November 12, 1988

Summary

U.S. coal production in the week ended November 12, 1988, as estimated by the Energy Information Administration, totaled 20.5 million short tons, a slight increase from production in the previous week. Production east of the Mississippi remained virtually unchanged while production west of the Mississippi increased by 0.1 million short tons (1.3 percent).

This week's coal output was 1.3 million short tons or 7.0 percent higher than in the corresponding week of 1987.

This publication includes coal production data by State for October 1988.
